HAN 5 New Functions

HAN 5 - New Functions

HAN 5 offers many new functions and technical innovations on different levels of the Software. This not only improves the user experience but also offers advantages for administration, hardware equipment and content integration.

Resource Optimized Architecture (optimal for cloud hosting or data center operation)

- Revised client model enables all the necessary configurations of the HAN server from the client. Consequently a direct working on the HAN server is no longer necessary.
- Using the Windows Core Server saves system resources.
- New database model with significantly lower hard disk usage.

Administration

- Metering to monitor data transfer between provider and user prevents misuse and blocking by the provider.
- Authentication via OpenID-Connect is now possible.
- Single sign-on support via the HAN Web API enables easy integration of e-resources into portal solutions.

User

- A-Z list now offers a selection by „subject“.
- Authentication via client certificates allows differentiation and automatic login even if IP authentication is not possible.

Content Providers / Publishers

- Additional information in the communication between HAN and providers allows content providers the differentiation and authentication of users in compliance with data protection regulations.
